

XML Software

Oxygen XML Editor

Oxygen is a full-featured XML editing and development environment. It is suitable for both text encoders and XML developers. For developers, it includes an Eclipse plug-in. IU has a site license for this product, a Java application available for Mac OS, Unix/Linux, and Windows. After installing the application you will be asked to paste the license text into a dialog box. See below for downloads links and the license.

TEI2HTML Stylesheets

These stylesheets, developed for [The Swinburne Archive](#), convert TEI documents to XHTML. There are a number of parameters that may be set to modify the output. There is some documentation in the bundle and embedded in the `tei2html-conf.xsl` file.

TEI Utilities

- [sgml2tei.pl](#). This perl scripts converts a flavor of SGML to something closer to TEI/XML. Converted document should be well-formed XML, but not quite valid TEI. Document will require additional editing to make valid.
