

# Mapping TEI to METS

## Status

This page is a **work in progress**.

## Examples

- [Swinburne Project](#), TEI P5 for [METS Navigator 1.0, Beta 2](#)  
The Swinburne Project contains literary works by and about Victorian poet, Algernon Charles Swinburne. The project is currently upgrading to TEI P5 from P4 and will include facsimile page images. The TEI to METS example included here are not yet in production but they work!
  - [File bundle including sample TEI files for a volume of poetry, TEI configuration file, XSL mapping and METS file](#) (zip)
- [Indiana Magazine of History](#), TEI P4 for new version of METS Navigator (forthcoming)  
Indiana Magazine of History project is an online, scholarly journal encoded at the issue-level in TEI P4 with article-level metadata captured in TEI P4 Independent Headers. The IMH TEI-METS processing isn't stand-alone as the TEI source files are ingested by our Fedora repository and are therefore additionally manipulated in that context. Further documentation about this process to be posted.
  - [IMH TEI to METS XSLT](#)

## Planning
