

Deployment Scenarios

Deployment Scenarios

This will eventually be better organized, but right now this is just a dumping ground for describing various deployment options for the Aquifer portal.

Capistrano

Mongrel Cluster

Startup scripts

config/mongrel_processes.rb is linked from the /etc/init.d directory

SOLR

Startup Scripts

The solrd script is saved to the /etc/init.d directory. It calls the solr.start and solr.stop scripts in the ../acts_as_solr/solr directory.

Solr data is in the deployment shared directory under solr/data

Managing logs

Apache configuration
