

# Deployment Scenarios

## Deployment Scenarios

This will eventually be better organized, but right now this is just a dumping ground for describing various deployment options for the Aquifer portal.

Capistrano

Mongrel Cluster

### **Startup scripts**

config/mongrel\_processes.rb is linked from the /etc/init.d directory

SOLR

### **Startup Scripts**

The solrd script is saved to the /etc/init.d directory. It calls the solr.start and solr.stop scripts in the ../acts\_as\_solr/solr directory.

Solr data is in the deployment shared directory under solr/data

Managing logs

Apache configuration
