Access Pages

Once a Recording has been cataloged, an XML file for the recording will be generated in **content/access/audio/**. It will be named based on the recording id (See Administrator's Guide - Filenaming Schemes for more information). Any updates to a recording will cause the XML file to be updated with the new information.

To view an access page, open <http://yourdomain.edu/variations/cgi-bin/access.pl?id=recordingid> where yourdomain.edu is the domain name or IP address of the Apache server running on the Variations machine and recordingid is the recording id mentioned above.

An example access page is shown below:

Variations

The Indiana University Digital Music Library

Quick Links: [CD 1](#)

Title: **Are You Experienced**

Source: **Personal Collection**

This recording is part of a personal collection and can only be accessed by students enrolled in a class for which it is on reserve.

To use the links to audio on this page, you must have Variations [installed on your computer](#), and either be using an authorized computer or be enrolled in a class for which this recording is on reserve. For more information about using Variations, see the [User Guide](#).

Use of this copy is restricted to authorized computers and users at Indiana University. The copyright law of the United States (Title 17 U.S. Code) governs the making of reproductions of copyrighted material. By using this copy, you agree to abide by U.S. copyright law and are liable for any misuse.

[Report a problem or send us a comment](#)

For more general information on access pages see [Administrator's Guide - Catalog Integration#Access Pages](#).

Statistics

Statistics are generated on user actions and streaming information. These statistics are available at <http://yourdomain.edu/variations/stats/viewStats.cgi> where yourdomain.edu is the domain name or IP address of the Apache server running on the Variations machine. This page is protected by the default username and password (dmlstats/stats) which should be changed for security purposes.

For more information about the statistics generated and this webpage see [Administrator's Guide - Statistics](#).

Log Files

Log files are discussed in the System Architecture Overview [here](#).

Watching log files can be useful for gathering statistics not already compiled, watching performance, and discerning source of errors. If an error arises, check the corresponding log file for a stack trace that gives details of an error. If the stack trace does not give enough information to fix the problem, email the Variations Development Team with the symptoms and the full stack trace.
