

Migration Scripts

General information on how the migration works and testing specific portions.

The [migration framework](#) we are using.

To test a specific migration script, for example: `20131218142013_add_display_aspect_ratio_to_master_file.rb`, you can run:

```
rake db:migrate:up VERSION=20131218142013
```

or if the version number is behind the current version number and you need to rerun it if you later discover it didn't run properly the first time, run:

```
rake db:migrate:redo VERSION=20131218142013
```
