

Variations Release 6.3

Variations Release 6.3

This page lists the changes from 6.2 to 6.3 for the Variations server and client.

The 6.3 release is a minor release. Improvements include:

- upgraded Windows JRE to 1.7
- fixed create record when MARC import not available
- upgraded log4j, cleaned up server logs
- fixed Accompanying Materials creation bug
- fixed dumpDB script to work on all materials by default, including items in digitization

Changes

This release encompasses subversion revision 953 to 1004 (in the dml-open repository).
