

# Current Release Information

## Avalon 7.3

Avalon 7.3 includes support for uploading files from Google Drive, a new component that allows users to view and download transcripts on the item page, and a variety of dependency updates and bug fixes. Github link: <https://github.com/avalonmediasystem/avalon/releases/tag/v7.3>

### Features

- Upload files directly from Google Drive
  - Google Drive can now be added a source for the Avalon Dropbox file picker
  - Update settings.yml with your Google OAuth 2.0 Client ID and secret to enable
- Transcript file download and viewer
  - Transcript documents can now be added to item sections
  - A transcript component will render on the item when a transcript document is present
  - Upload in VTT or or DOCX format to view the transcript on the item page
  - Users can download transcript files and click VTT timestamps to seek in the viewer
- Support for Google Tag Manager values for enhanced Analytics data

### Updates

- Ruby 2.7 support
- Updated Docker build
- Dependency updates
- Better User Experience When Removing Captions
- Better resizing for the Advanced XML editor

### Bug Fixes

- Fix for broken copy functionality on playlists
- Fix for file handling when a collection folder is missing or misnamed
