This documentation is current for Release 7.3

- Release 6.x: v.194
- Release 5.x: v.111
- Release 4.x: v.88
- Release 3.x: v.68
- Release 2: v.47.
- Release 1: v.23

Managing Content

Manual Creation, Editing, Deletion

- After saving the Manage Files page without uploading any files, attempting to upload files later results in an error - #2387
- 2. Not all EDTF Level 1 dates are accepted #3867
- File names with single quote characters result in errors during ingest (also applicable for batch) #4444
- 4. Error When Selecting Shortcut Links in Google Drive #4541

Batch Ingest

1. When a master file is moved during a batch ingest, the batch fails - #2310

Item Access

- An unpublished item with a lease to a user for a specific date can still be found by the user through browsing or searching - #1686
- Published but hidden items with a lease to a user or a group still appear to the user though browsing or searching - #2388
- Items in the "Selected Items" list do not disappear and are still available to a user after a lease ends - #1701
- Item lease with a date range assigned to an IP address gives access to the item even beyond the date range - #2081

Avalon Media Player

Playback

 Structural metadata with undefined sections causes unexpected behavior in the track scrubber -#3047

Display

- 1. Within an iFrame, the media player does not resize #2961
- 2. Embed login popup does not auto-close when using devise DB authentication #3885

Accessibility

- 1. In certain configurations of Firefox, Play/Pause is not accessible with the SPACEBAR #1644
- 2. Captions are deselected when moving to different section in Safari. Users need to click the captions button to re-enable captions when a new section starts playing (more information)

Miscellaneous

- 1. The latest version of Wowza Streaming Server (4.7.8) is not compatible with Avalon #3799
- Missing values in Avalon's controlled vocabulary configuration file results in 500 errors https://gi thub.com/avalonmediasystem/avalon/issues/4040
