

# Google Drive Dropbox

Enabling a connection to Google Drive requires the creation of an OAuth 2.0 Client ID through the Google API dashboard.

## Steps to Enable

- Follow the steps at <https://developers.google.com/identity/protocols/oauth2> to create an OAuth 2.0 Client ID for your Avalon instance
- Use the Client ID and secret in your Avalon site's settings.yml (see [Upgrading Avalon 7.2 to Avalon 7.3](#) for config details)
- Once configured, restart the app
- Google Drive will now appear as a source in the "Open Dropbox" file picker in Avalon
  - For instructions, see [Connecting to Google Drive](#)
